

Product Information Sheet for EYEWEAR

An Introduction to Liquid Glass Shield Eyewear Protection

At Liquid Glass Shield it's our vision to take existing nanotechnology that is used in cutting edge industrial applications, together with new developments in optics and bring them together to produce a unique coating specifically designed for eyewear protection. For the first time pure liquid glass can be applied without the need for specialist equipment and complicated application procedures.

Super flexible and 500 times thinner than a human hair.

Most people are completely unaware of nanotechnology, coatings so thin and flexible they are 500 times thinner than human hair giving amazing protection to all surfaces hard and soft, porous and non-porous.

Liquid Glass Shield eyewear coatings are invaluable to anyone who needs and uses eyewear in all its many forms. The eyewear formulation has been principally designed to protect lens and frames by invisibly coating all metal, glass and plastic. The formulations give significant protection from abrasion, scratching, dirt, dust, organic matter and even harmful bacteria. All treated eyewear supplied with Liquid Glass Shield includes a comprehensive 24-month warranty on lenses providing protection against chips, scratches and breaks - **GUARANTEED PROTECTION FOR 2-Years.**

A correctly applied application will last up to 24 months dependent on use and operating conditions, in tests treated surfaces were found to improve visibly and optical clarity while looking brighter and cleaner. When tested for bacteria, results found that unprotected eyewear was 100,000 more likely to have harmful bugs and viruses on the surfaces.

Liquid Glass can be applied to all surfaces.

- Suitable for all traditional and ultra modern high-tech eyewear.
- Fully tested on all eyewear including vision corrective glasses and sunglasses.
- Effective protection against UV discolouration and reflection.
- Anti-bacterial properties keep surfaces cleaner, germ and bacteria resistant which reduces the transfer of harmful bugs, which can cause sickness.
- Treated surfaces become abrasion resistant.
- Reduced condensation even in wet and damp conditions.
- Improved object and hazard recognition in poor light and inclement weather.
- Metal components and fixings become corrosion resistant.

100% natural and chemical free.

All Liquid Glass Shield coatings are 100% natural, chemical-free, anti-corrosive, anti-stick and provide easy-clean surfaces. Liquid Glass Shield produces a super-hydrophobic surface, which makes it perfect for all eyewear.

Liquid Glass Shield naturally reduces the replication of bacteria and germs especially useful in medical and high dependency environments. But this simple and effective technology also protects the wearer of eyewear from potential damage while keeping the lenses and frames looking at their best. So, if you own, market sell or work with eyewear take a look our latest range of Liquid Glass Shield eyewear products and see how the future in protection can perform for you.

EYEWEAR

Easy application system: Full instructions inside and find more tips and ideas at www.LiquidGlassShield.com

Liquid Glass Shield™ protects all eyewear, vision correction, fashion or sunglasses. One easy application protects your eyewear from dirt, oil, liquid and dust. It also helps stop abrasion, fingerprints and significantly reduces small marks and scratches.

Compatible and tested with all:

- Prescription and reading Glasses
- Sunglasses

UK Administration:
Building 1000
Lakeside North Harbour
Western Road
